

STRATEGIC PLAN

Cryptora Future Addons

Simple Execution Plan

1. Our Main Goal

We want to transform Cryptora into a market-leading product by focusing on four key pillars:

Safety First

Make the wallet safer for normal users.

User Friendly

Easier to understand and navigate.

Daily Utility

More useful every single day.

Monetization

Ready for a paid subscription model.

2. Execution Roadmap (What to Build First)

We have prioritized features to deliver quick user value first, followed by premium upsell features.

PHASE 1: SAFETY & ALERTS

1. Scam Detection Engine (Pt. 4)

2. Smart Notification Center (Pt. 11)

PHASE 2: INSIGHTS & RESEARCH

3. Wallet Health Score (Pt. 3)

3. Selected Ideas Detailed Breakdown

We selected these specific points because they are highly practical and match real market needs.

Point 4 — Scam Detection Engine

CONCEPT	Before a user clicks confirm, the app warns if the transaction looks dangerous.
GOAL	Reduce scam losses, build trust, and make warnings easy to understand.
CHALLENGE	Some scam checks can be wrong (false alarms or missed scams).

Point 11 — Smart Notification Center

CONCEPT	App sends useful alerts (security alerts, token unlocks, important events).
GOAL	Keep users active, ensure they don't miss events, improve retention.
CHALLENGE	Too many alerts can irritate users (notification fatigue).

Point 3 — Wallet Health Score

CONCEPT	A dashboard score showing wallet safety and risk in one place.
GOAL	Give a clear view, help beginners understand risk, show improvement tips.
CHALLENGE	If the score logic is unclear, users may not trust the metric.

Point 13 — Token Research Inside Wallet

CONCEPT	When tapping a token, the app shows quick info and risk details.
GOAL	Help users research in-app, support better decisions, increase time spent.
CHALLENGE	Data from different sources may not always perfectly match.

Point 16 — AI Spending Analytics

CONCEPT	Monthly view of where money went (fees, swaps, bridge costs).
GOAL	Help users understand spending, identify savings, create premium reports.
CHALLENGE	Correctly classifying each distinct transaction can be difficult.

Point 7 — AI Tax Assistant

CONCEPT Generate tax-friendly reports from wallet transactions.

GOAL Save manual tax work, offer a strong premium feature, attract pro users.

CHALLENGE Tax rules change by country and update frequently.

4. Out of Scope (Skipped Features)

The following ideas were evaluated but excluded from the current roadmap due to high risk factors:

- **Point 5 (Auto Yield Optimizer):** High financial liability if underlying protocols fail.
- **Point 20 (Community Marketplace):** High fraud, legal, and compliance complexity.
- **Point 18 (Web3 Credit Score):** Significant regulatory and partner dependency risks.
- **Point 8 (Family Recovery Vault):** Involves a highly sensitive and complex security flow.

5. What Success Looks Like

Our business targets for this rollout:

- Users report fewer scam incidents.
- More users open the app weekly (improved retention).
- More users move to the paid subscription plan.
- Better customer trust and app store reviews.
- Higher monthly subscription revenue (MRR).

6. Core Strategy

First build safety + alerts, then add insights + reports, then scale premium plans.
